

FLOWCORE

Manufacturing Operations Platform

Where Materials, Data, and Decisions Flow Together

WHY FLOWCORE?

Manufacturing operations are often fragmented across disconnected systems. Procurement, inventory, project records, and operational documents are managed separately, leading to manual effort, delayed decisions, and limited visibility.

SOLUTION ?

FlowCore brings these workflows together into a single intelligent platform—delivering end-to-end traceability, operational visibility, and faster decision-making.

CORE MODULE

**Seamless
Procurement Lifecycle Automation**

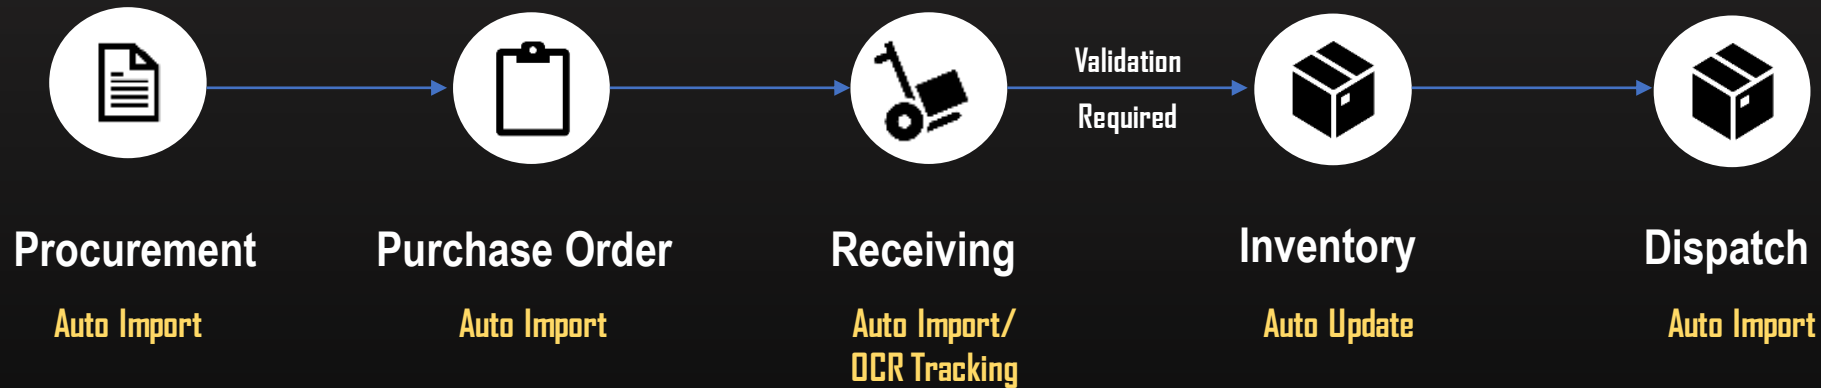

**Real-Time
Inventory Monitoring**

**Centralized
Project Workspaces**

A modular manufacturing operations platform connecting procurement, inventory, projects, and intelligent workflow automation.

Procurement Lifecycle Automation

Workflow Engine

Dashboard

Inventory

Info

Centralized Record Management
Hierarchical Date-Based Storage (Year-Month-Day)
Visual Data Representation
Pre-Inventory Invoice Verification

Intelligent Inventory Management

Global Inventory

Centralized Inventory Management
Real-Time Inventory Updates & Alerts
Structured Item Classification
Comprehensive Item History & Analytics

Global Info Page

Project Centric Record

Project List

Project Dashboard

Project-Centric Dashboards

Automated Record Linking with Minimal Manual Input (PR and Dispatch)

Dedicated Procurement & Dispatch Modules by Project

Configurable Timelines for Events, Deliverables & Documentation

Timeline

KEY CA

Global Search

Unified Cross-Module Search
Intelligent Page Switching
Instant Navigation & Filtering

Personalized Notification Preferences

Role-Based Alert Management

Real-Time Event Notifications

ADD-ONS

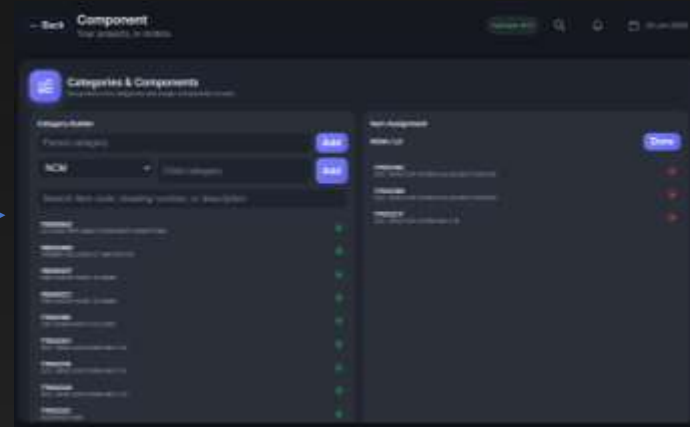

Audit Trails

Centralized Audit Trail for
Event Monitoring

Inventory Component Classification

Item Classification
Facilitate Easy Search/Filter
Auto alert for Specific PR generation

Offline Workspace

Maintain a local dataset
When not connected to Enterprise Server
Only view allowed
Data based on last sync

SYSTEM ASSURANCE

Backup

Daily Backup Updated
Followed by Weekly/Monthly Updation

Enterprise Data Security

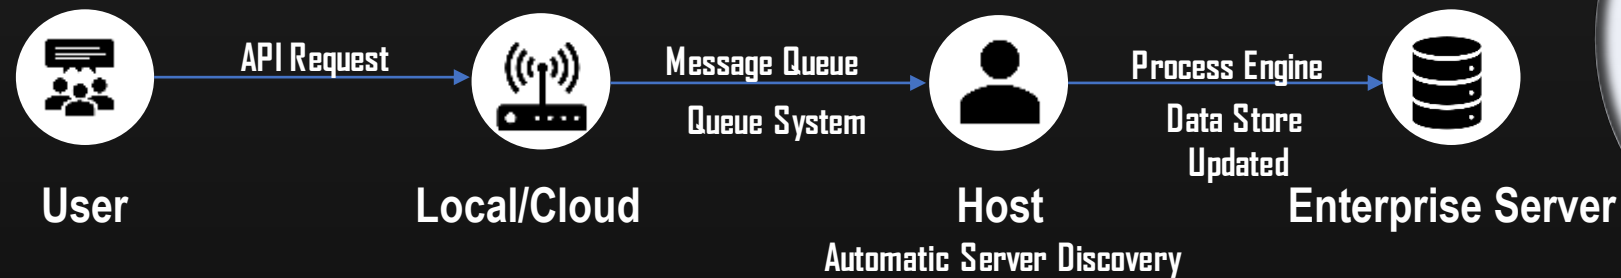

All the Data are Recorded ,Processed and
Maintained Internally only

Enterprise Reliability

Simulated up to 200k Dataset

SYSTEM ARCHITECTURE

Front End: Html , Java Script , Css , Electron , Google

Back End: Python , SQLite , SQLAlchemy , CORS , Paddle OCR

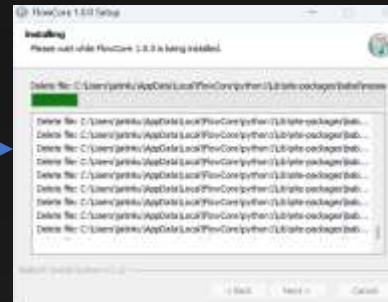

INSTALLATION & DEPLOYMENT

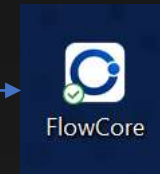

Copy the setup to
local PC

Run the setup ,
Click Install

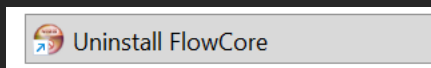

Wait for install to complete

Desktop access is created
for user to access.

UNINSTALL

Look for Uninstall,
Run it

Click Uninstall , Wait for it to
finish and all files related will
be deleted

THANK YOU !
